

HOANG NGOC LINH - Li

Ho Chi Minh, Vietnam

☎ 0344965661 ✉ linhhn.bkdn@gmail.com 🌐 <https://www.linkedin.com/in/li-hnl/>

OBJECTIVE

Principal Software Engineer scaling fintech platforms at 10k CCU and 3k tx/day on AWS/EKS. Built and lead Money Forward Vietnam's AI Agent platform (LangChain, RAG, Function Calling) and a 10-engineer team across backend, cloud, and GenAI. Three-time award winner (MVP Q1/2025, MVP 2023, MVT 2023) for scaling AI infrastructure and cutting P1 incident MTTR to under 30 minutes through centralized observability.

EDUCATION

Da Nang University of Science and Technology - Major: Mechatronic Engineering
GPA: 3.16/4

Aug2013 - Aug 2018

CERTIFICATIONS

Professional Scrum Master™ I (PSM I)
AWS Certified Solutions Architect – Professional
AWS Certified Solutions Architect – Associate
AWS Certified Cloud Practitioner
Certificate AI Practitioner VTC Academy
Certificate CNN in TensorFlow deeplearning.ai
Certificate AI for everyone deeplearning.ai
Certificate of English language proficiency B1

HONORS & AWARDS

MVP: Most Valuable Personal Award Q1/2025	2025
MVP: Most Valuable Personal Award 2023	2023
MVT: Most Valuable Team Award 2023	2023

SKILLS

Language	Python (5+ years), C/C++, Golang, Terraform, FastAPI, Flask
Framwork	Django (5+ years), DRF (5+ years), Flask (3+ years), FastAPI (3+ years), Gin, Celery (5+ years)
Big Data & Data Engineering	PySpark, Apache Airflow
AI Technologies	Generative AI: Llama, Langchain, RAG (Retrieval-Augmented Generation), Function Calling
Databases	Computer Vision/Machine Learning: SVM (Support Vector Machine), VGG16
Version Control & CI/CD	MySQL, PostgreSQL, Redis
Cloud Platforms	Git, Docker, Kubernetes (K8s), Docker Compose
Software Architecture	AWS (S3, EC2, RDS, SQS, SNS, EKS, Cognito)
Design System	Microservices, SOLID, OOP, Design Patterns (Factory, Singleton, IoC)
Development Process & Software Lifecycle	Clean Architecture, MVT, MSV, MVVM
Frontend	Agile/Scrum methodologies, SDLC (Software Development Life Cycle), Test-Driven Development (TDD), CI/CD, CircleCI
Other Technologies:	ReactJS, JavaScript, Typescript, Tailwind Css
	ELK, Kafka, JWT, KEDA

WORK EXPERIENCE

MONEY FORWARD VIET NAM - Technical Lead/ Principal Software Engineer
A fintech company headquartered in Japan.

Jan 2022 - Present

Responsibilities:

- Architected and operated production microservices on EKS serving 10k+ concurrent users and 3k transactions/day for invoice and AI fintech workloads.
- Scaled the platform with KEDA-driven autoscaling — pods scale 5 → 30 (6x spike absorption) triggered by SQS depth and pod CPU/memory, eliminating manual ops during peak traffic.
- Owned platform reliability across AWS and Kubernetes — built centralized ELK observability and structured on-call playbooks, cutting P1 incident MTTR to under 30 minutes.
- Mentored a 10-engineer team on backend, cloud, and AI/ML stacks; led ~200 PR reviews/year raising team-wide code consistency and quality.
- Built CircleCI pipelines and standardized release process — established weekly production release cadence across dev/staging/production with repository and design-pattern guidelines adopted across the org.

PARCEL PERFORM TECH HUB VIET NAM - Backend Engineer

Sep 2021 - Jan 2022

Pushing beyond post-purchase. Unlocking real value for e-commerce businesses with our End-to-End Data & Delivery Experience Platform.

Responsibilities:

- Built authentication and notification microservices (JWT, OAuth2) for a parcel-tracking platform processing ~1 million writes/day.
- Designed async task pipelines on Kafka (message broker) and Celery (workers) to absorb spiky logistics traffic.
- Tuned services for availability and performance in close collaboration with the platform team.

AMPERE COMPUTING VIET NAM - Backend Engineer

Mar 2019 - Sep 2021

Ampere Computing LLC is an American fabless semiconductor company based in Santa Clara, California that develops processors for servers operating in large scale environments.

Responsibilities:

- Built backend services for hardware-test automation and log analytics, accelerating QA regression cycles.
- Trained SVM classifiers for object-classification tasks in the chip-validation pipeline.
- Optimized backend systems and contributed to code reviews, bug fixing, and feature enhancements.

QUANG TRUNG SOFTWARE CITY - Fullstack Engineer

Jan 2016 - Mar 2019

Quang Trung Software city company specializing in software development and researching innovative products and emerging technologies for global clients

Responsibilities:

- Shipped end-to-end IoT prototypes - Arduino firmware, Django backend, web dashboard - demoed directly to clients.
- Researched and prototyped emerging IoT stacks for client-facing R&D projects.

ADDITIONAL INFORMATION

- Extensive experience with microservices architecture and deploying cloud-based applications on AWS.
- Skilled in CI/CD, Docker, Kubernetes, PySpark, Apache Airflow, Generative AI, and Computer Vision.
- Passionate about machine learning, AI technologies, and applying them in real-world projects to create scalable and innovative solutions.

PROJECTS**AI Agent Platform**

(Jan 2025 - Present)

Customer	MONEY FORWARD VIET NAM
Description	- This is an platform to provide: protocol, plug and play AI Agent
Team size	10
My position	Technical Lead/ Principal Software Engineer
My responsibilities	• Designed and configured AWS infrastructure, deployed on Kubernetes (EKS) with Terraform. • Implemented scalability and auto-scaling using KEDA, SQS, and pod CPU/Memory. • Developed Dockerfiles, Docker Compose configurations for development, staging, and production environments. • Led application design, including DDD documentation and UML diagrams. • Developed backend services, including notifications and webhooks using Celery and Django REST Framework. • Conducted code reviews, optimizations • Managed Agile processes, ensuring that sprint cycles followed proper Scrum methodology.
Technologies used	- Microservice - EKS, SQS, S3, SNS, Sendgrid, Cognito, Redis, AWS KMS - FastAPI, celery, gin, pydantic

Received Cloud Invoice

(Jan 2022 - Present)

Customer	MONEY FORWARD VIET NAM
Description	- This is an application to receive invoices and restore, OCR, and process payment as well - Concurrent Users/CCU: 10k

	- Transaction per day/ Write: 3k
Team size	10
My position	Technical Lead/ Principal Software Engineer
My responsibilities	- Designed and configured AWS infrastructure, deployed on Kubernetes (EKS) with Terraform. - Implemented scalability and auto-scaling using KEDA, SQS, and pod CPU/Memory. - Developed Dockerfiles, Docker Compose configurations for development, staging, and production environments. - Led application design, including DDD documentation and UML diagrams. - Developed backend services, including notifications and webhooks using Celery and Django REST Framework. - Conducted code reviews, optimizations - Managed Agile processes, ensuring that sprint cycles followed proper Scrum methodology.
Technologies used	- Microservice - EKS, SQS, S3, SNS, Sendgrid, Cognito, Redis - Django, celery, gin, drf, graphene-django

Web Sending Invoice (Jan 2022 - Present)

Customer	MONEY FORWARD VIET NAM
Description	- This is an application to receive invoices and restore, OCR, and process payment as well - Concurrent Users/CCU: 5k - Transaction per day/ Write: 2k
Team size	10
My position	Technical Lead
My responsibilities	- Developed backend APIs using Graphene-Django for GraphQL and Django REST Framework for RESTful APIs. - Implemented design patterns such as Factory and IoC for better maintainability. - Managed AWS infrastructure, including scaling and optimization using Kubernetes and Terraform. - Conducted code reviews, optimizations, and bug fixing. - Played an active role in Agile ceremonies, leading daily standups and sprint planning sessions.
Technologies used	- Microservice - EKS, SQS, S3, SNS, Sendgrid, Cognito, Redis - Django, celery, gin, drf, graphene-django

PP core system (Sep 2021 - Jan 2022)

Customer	PARCEL PERFORM TECH HUB VIET NAM
Description	- This is the core system for logistics for tracking parcels, sending out notifications, optimize distance and goods arrangement - Transaction per day/ Write: 1 million
Team size	12
My position	Backend Engineer
My responsibilities	- Analysis and design - Development - Implement/develop authentication, authorization microservice and notification service JWT for authenticcate Oauth2 for flow authentication Kafka for message broker with celery FastAPI for internal authentication - Bug Fixing
Technologies used	- Microservice - docker-compose

- Django, celery, drf

Avion

(Mar 2019 - Sep 2021)

Customer	AMPERE COMPUTING VIET NAM
Description	- This is the software to run test cases for hardware, store logs, search, statistics
Team size	5
My position	Backend Engineer
My responsibilities	- Analysis and design - Development • Implement backend and front end as the MVC pattern 1. HTML, Javascript to create template 2. Session ID for authenticate 3. Flask for internal API - Bug Fixing
Technologies used	- Monolithics - docker-compose - Django, celery, drf

IoT Ampere

(Jan 2016 - Mar 2019)

Customer	Quang Trung Software City
Description	- Arduino-based system measures current in real time, transmits the data to a web server, enabling fast, accurate, and convenient online monitoring and display of results.
Team size	5
My position	Full stack Engineer
My responsibilities	- Analysis and design - Development 1. HTML, Javascript to create template 2. Django for API 3. Arduino IDE for - Bug Fixing
Technologies used	- Monolithics - docker-compose - Django, celery, drf - Arduino device
